

Meetings

B02 meets twice a year, usually in May and November, with approximately 40 members attending technical meetings. Meeting registration is free and offers the opportunity to:

- Network face-to-face with nonferrous metals and alloys professionals from all over the world
- Directly discuss the development of new and revised standards.
- Be among the first to know about new and emerging technologies

Membership

ASTM International welcome all industrial and technical professionals with a desire to work toward further development of standards for Committee B02. Membership in Committee B02 provides the opportunity to:

- Network with industry professionals worldwide,
- Have direct input into the development of new and revised standards,
- Remain current on new and emerging technologies,
- Participating members can request any free volume, per year, of the *Annual Book of ASTM Standards* per year (online or print) that ASTM offers,
- Enjoy discounts on all ASTM publications,
- Receive free subscriptions to *ASTM Standardization News* and *ASTM eNews*,
- Benefit from reduced fees for attendance at ASTM symposia and technical workshops,
- Participate in free informational webinars
- And much more!

To learn more about member benefits and membership types, visit: www.astm.org/MEMBERSHIP

The annual fee to be an informational or participating member of ASTM is \$75 USD. Annual membership provides access to multiple technical committees at no additional cost.

About ASTM International

Committed to serving global societal needs, ASTM International positively impacts public health and safety, consumer confidence, and overall quality of life. We integrate consensus standards – developed with our international membership of volunteer technical experts – and innovative services to improve lives... Helping our world work better.

Committee B02 Nonferrous Metals and Alloys

www.astm.org/COMMITTEE/B02

What is ASTM Committee B02?

ASTM Committee B02 on Nonferrous Metals and Alloys was formed in 1902.

The Committee, with current membership of approximately 210, has jurisdiction of over 215 standards, published in the *Annual Book of ASTM Standards*, **Volume 2.04**.

Committee B02 has 5 technical subcommittees that maintain jurisdiction over these standards. Information on this subcommittee structure and B02's portfolio of approved standards and work items under construction are available from the List of Subcommittees, Standards and Work Items below. These standards have and continue to play a preeminent role in all aspects important to the industry including: compositions, properties, dimensions, classification, nomenclature, analysis, and quality assurance.

ASTM B02 NONFERROUS METALS AND ALLOYS

COMMITTEE STRUCTURE

B02.02

Refined Lead, Tin, Antimony, and Their Alloys

Scope

To develop and maintain standards on refined lead, tin, antimony and their alloys from both primary and secondary sources, in refinery shapes and other forms. Standards shall include but are not limited to specifications, test methods, classifications and terminologies.

B02.04

Zinc and Cadmium

Scope

To develop and maintain standards on zinc and cadmium and their alloys and related products.

B02.05

Precious Metals and Electrical Contact Materials and Test Methods

Scope

To develop and maintain standards for refined gold, silver, the platinum group metals and their alloys, specifications for electrical contact materials, and test methods for electrical contacts and connectors, including sliding contacts, make-and-break contacts and static connectors and connections; the development of testing apparatus, methods and terminology and stimulation of research to accomplish the forementioned.

Scope

The development and maintenance of standards on compositions, properties, dimensions, test methods, classifications, and terminology of nonferrous metals and alloys, and of solder and solder fluxes and materials used in the manufacture of electrical heating devices, electrical resistance devices, electrical contacts and conductors, and thermosensitive elements in thermostats.

Excluded are copper and copper alloys, light metals and alloys, reactive and refractory metals and alloys and engineered metal powders, electronic grade materials and wires, and certain accessories for use as electrical conductors.
